

FDI Analytics Toolbox

FAULT DETECTION • IDENTIFICATION • EXPLANATION

From raw sensor signals to a diagnosed fault — in one flow.

Point it at any multivariate time-series. No labels, no ML expertise required — every step is guided and explained.

Ingest

Pre-process

Features

Detect

Identify

Report

Data Explorer

Upload CSV or Excel and inspect structure, statistics and per-variable plots.

Pre-processing

Optional cleaning: imputation, outlier removal, detrend, filter, normalize.

Feature Extraction

Windowed statistical features — or learned deep-learning embeddings.

Fault Detection CORE

Unsupervised anomaly scoring — Isolation Forest, PCA, One-Class SVM, LOF.

Identification CORE

Contribution analysis pinpoints the variables and features behind each fault.

Evaluate & Export

Summary metrics and score distributions — download CSV or HTML reports.

Built-in AI Assistant

Ask in plain language. It reads your full analysis and returns a diagnosis with next steps — made for engineers **and** non-specialists.
